## 报告人简介

Prof. Dr. Stefan Zerbe, tenured full professor since 2009 and Vice-Rector for Research in the period 2012-2016 at the Free University of Bozen-Bolzano, Italy. Stefan Zerbe also holds an Honorary Professorship at the University of Applied Sciences and Arts in Göttingen, Germany. He has published several books with Springer Publ. on ecosystem and landscape restoration and more than 350 scientific papers. He teaches Landscape Ecology, Restoration Ecology, and Vegetation Ecology at several universities in Europe and Latin America. He supervised more than 80 bachelor, master, and diploma theses and 35 PhD theses, and is particularly engaged in international and intercultural student exchanges.

With the UN Decade on Restoration, the restoration of degraded ecosystems and land-use systems has been put on the global agenda of environmental policy. In 2024, Europe implemented a new restoration law against the background of the European-wide degradation of terrestrial and aquatic land-use systems and the urgent need to counteract the loss of biodiversity and ecosystem services. In the presentation, principles and paradigms of ecosystem restoration will be outlined, focusing on the Central European perspective. Measures and objectives of ecosystem restoration will be critically reflected. Examples will be particularly presented from the restoration of forest ecosystems and urban environments.
